

“Math for English Learners” Workshop

This interactive workshop is designed for educators who want their English Learners (ELs) to more actively and successfully participate in learning math. Workshop attendees will experience and take away practical ways to strategically support skill development, achievement, and enjoyment of math among their ELs. Connections to Mathematical Practices and the Content Standards as described in the Common Core State Standards will be addressed.

What You Will Learn

During this workshop, you will learn engaging, effective strategies that:

- *build on your students’ prior knowledge and learning strengths;*
- *encourage students to think, ask questions, and contribute to group discussions;*
- *support students in developing and using math vocabulary and academic language;*
- *foster student motivation and confidence as learners of math; and,*
- *engage students in building their mathematical expertise to ensure the transfer of classroom learning to successful test performance and real-life applications.*

Who Should Attend?

Teachers, coaches, and administrators will benefit greatly from attending this workshop. Differentiated instructional strategies for teaching math in elementary and secondary classrooms will be addressed.
